Therap Supports Alabama Department of Mental Health and Local 310 Boards with Medicaid/TCM Billing

Alabama Providers Implement Therap's LTSS Software Tools for Targeted Case Management and Early Intervention Services

BIRMINGHAM, Ala., March 8, 2016 /PRNewswire/ -- Therap's disability software is aligned with Alabama's Division of Developmental Disabilities in their effort to improve quality of Case Management. Therap has previously collaborated with DMH to implement the software's incident reporting tools across the state. The latest system features include specific tools designed for the use of case managers. Case Managers can record individualized service notes and enter service duration, location and type in Therap. These notes generate professional claims for billable services which are submitted electronically to Alabama Medicaid.

Therap's Individual Home Page (<http://support.therapservices.net/release-notes-and-system-updates/release-notes-for-2016-0-0/#ReleaseNotesfor2016.0.0-Individual-Home-Page-Oversight>) gives Case Managers a general case overview. From a central dashboard, Case Managers can review individual profiles (<http://www.therapservices.net/therap-basic/individual-data-forms/>) and access demographic, contact and health information, and guidelines. They can also note the status of all plans, including the person-centered Individual Support Plan (<http://www.therapservices.net/therap-basic/individual-services-plans/individual-support-plan/>), supplemental Habilitation (<http://www.therapservices.net/therap-basic/individual-services-plans/individual-habilitation-plans/>), Behavior (<http://support.therapservices.net/documentation/individual-supports/behavior-tracking-module/behavior-plan/>) and Care Plans (<http://support.therapservices.net/documentation/individual-supports/health-plus-specific-features/care-plan/>), and check the case status (<http://support.therapservices.net/release-notes-and-system-updates/release-notes-for-2016-0-0/#ReleaseNotesfor2016.0.0-Individual-Home-Page-Oversight>) of individuals on their caseload, including enrollment and discharge dates. Therap's person-centered Individual Support Plan (<http://www.therapservices.net/therap-basic/individual-services-plans/individual-support-plan/>) brings the full picture of supports and outcomes together, and allows case managers to quickly reference goals and individual outcomes statuses. Case Managers may review team plan minutes and create an ISP Agenda (<http://support.therapservices.net/documentation/individual-supports/isp-agenda/>) to drive meetings based on the needs and areas identified through the individual's Personal Focus Worksheet (<http://www.therapservices.net/isp-mobile/personal-focus-worksheet/>). Interconnected modules ensure that service data collected in Therap generates reports and drives the progress of outcomes.

Therap's Long Term Supports and Services software also assists Early Intervention providers in tracking contacts and service flow. Agencies find Therap's Individual Data (<http://www.therapservices.net/therap-basic/individual-data-forms/>) form an essential first step in establishing supports for children identified for early intervention.

Contacts such as doctors, speech pathologists and occupational and physical therapists can be added to universal directories (<http://support.therapservices.net/documentation/provider-administration/custom-field-and-shared-contact/>) for contact information, while personal contacts and family information can be added to the Individual Data form and Individual History (<http://support.therapservices.net/documentation/individual-supports/individual-medical-information/individual-history/>).

About Therap Services

Therap's **HIPAA, ARRA and HITECH** compliant **Developmental Disabilities** software applications are widely used in home and community-based services (**HCBS**) for documentation, communication and reporting and by the broader Longer Term Supports and Services (LTSS) community. Therap offers a single software solution for data driven outcomes, quality assurance, electronic billing.
